ABOUT THE COVER: The cover image shows illustrations of proximal ulna osteotomy demonstrating the location of the osteotomy procedure, a posterior view demonstrating the proximal ulna hinged open rotating on the anterior band of the medial collateral ligament, and a partial release of the flexor-pronator mass, allowing complete visualization and access for the fixation of the distal humerus articular surface. See the article by Daneshvar et al, "Proximal Ulna Osteotomy for Complex Fractures of the Distal Humerus: A 3-Dimensional Laser Analysis and Comparison With Olecranon Osteotomy" on page 320.
