
QUARTERLY ASSH MEMBER QUESTIONNAIRE

RESULTS OF QUARTERLY ASSH MEMBER QUESTIONNAIRE

1. In an acute, zone II flexor tendon laceration, what general type of repair do you do?

2-strand without epitendinous repair	8%
2-strand with epitendinous repair	25%
4-strand without epitendinous repair	0%
4-strand with epitendinous repair	50%
>4-strand repair	17%
2. In an acute, zone II laceration of both the FDP and FDS tendons, in what percent of cases do you repair the FDS?

75% to 100% of cases	75%
50% to 75% of cases	0%
25% to 50% of cases	8%
0% to 25% of cases	17%
3. How long after a sharp injury will you attempt a primary repair of a zone II flexor tendon laceration?

3 weeks	84%
6 weeks	13%
8 weeks	0%
10 weeks	0%
>12 weeks	0%
4. How often do you undertake a primary tendon grafting versus secondary (2-stage/Hunter rod) tendon grafting for a sharp, old (>10 week) FDP laceration?

Primary grafting	48%
Secondary grafting	52%
